SECTION 3 - RATES AND SERVICES, Continued

3.9. Local Service – Application of Rates, Continued

3.9.2. Charges Based on Duration of Use

Where charges for a service are specified based on the duration of use, such as the duration of a telephone call, the following rules apply:

- A. Calls are measured in durational increments identified for each service. All calls held for a fraction of a measurement increment are rounded-up to the next whole measurement unit.
- B. Timing on completed calls begins when the called party answers the call. Answering is determined by hardware answer supervision in all cases where this signaling is provided by the terminating local carrier and any intermediate carrier(s). Timing for operator service person-to-person calls starts with completion of connection to the person called or an acceptable substitute, or the PBX station called.
- C. Timing terminates on all calls when the calling party hangs up or the Company's network receives and off-hook signal from the terminating carrier.
- D. Calls originating in one time period and terminating in another will be billed at the rates in effect at the origination of the call.
- E. All times refer to applicable central standard or central daylighttime.

3.9.3. Rates Based Upon Distance, Continued

Where charges for a service are specified based upon distance, the following rules apply:

Distance between two points is measured as airline distance between the rate centers of the originating and terminating telephone lines. The rate center is a set of geographic coordinates, as referenced in the Local Exchange Routing Guide issued by Telecordia, associated with each NPA-NXX combination (where NPA is the area code and NXX is the first three digits of a seven-digit telephone number). Where there is no telephone number associated with an Access Line on the Company's network (such as a dedicated 800 or WATS Access Line), the Company will apply the rate center of the Customer's main billing telephone number.

The airline distance between any two rate centers is determined as follows:

- A. Obtain the "V" (vertical) and "H" (horizontal) coordinates for each Rate Center from the above-referenced Bellcore Document.
- B. Compute the difference between the "V" coordinates of the two rate centers; and the difference between the two "H" coordinates.

SECTION 3 - RATES AND SERVICES, Continued

3.9. Local Service – Application of Rates, Continued

- C. Obtain the "V" (vertical) and "H" (horizontal) coordinates for each Rate Center from the above-referenced Bellcore Document.
- D. Compute the difference between the "V" coordinates of the two rate centers; and the difference between the two "H" coordinates.
- E. Square each difference obtained in step (b) above.
- F. Add the square of the "V" difference and the square of the "H" difference obtained in step (c) above.
- G. Divide the sum of the squares by 10. Round to the next higher whole number if any fraction is obtained.
- H. Obtain the square root of the whole number result obtained above. Round to the next higher whole number if any fraction is obtained. This is the airline mileage.
- I. FORMULA:

$$\text{The square root of: } \frac{(V1-V2) + (H1-H2)}{10}$$
